-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

1)☐ Responsive to communication(s) filed on *25 November 2002* .

2a)☐ This action is **FINAL**. 2b)☒ This action is non-final.

3)☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

4)☒ Claim(s) *1-18* is/are pending in the application.

4a) Of the above claim(s) *15-18* is/are withdrawn from consideration.

5)☐ Claim(s) _____ is/are allowed.

6)☒ Claim(s) *1-14* is/are rejected.

7)☐ Claim(s) _____ is/are objected to.

8)☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

9)☐ The specification is objected to by the Examiner.

10)☐ The drawing(s) filed on _____ is/are: a)☐ accepted or b)☐ objected to by the Examiner.

Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).

11)☐ The proposed drawing correction filed on _____ is: a)☐ approved b)☐ disapproved by the Examiner.

If approved, corrected drawings are required in reply to this Office action.

12)☐ The oath or declaration is objected to by the Examiner.

Priority under 35 U.S.C. §§ 119 and 120

13)☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).

a)☐ All b)☐ Some * c)☐ None of:

1.☐ Certified copies of the priority documents have been received.

2.☐ Certified copies of the priority documents have been received in Application No. _____ .

3.☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

14)☒ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).

a) ☐ The translation of the foreign language provisional application has been received.

15)☒ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

Attachment(s)

1) ☒ Notice of References Cited (PTO-892)
2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
3) ☒ Information Disclosure Statement(s) (PTO-1449) Paper No(s) *5, 11* .
4) ☐ Interview Summary (PTO-413) Paper No(s). _____ .
5) ☐ Notice of Informal Patent Application (PTO-152)
6) ☐ Other: .

FILE COPY

DETAILED ACTION

Applicant's election with traverse of Group I in Paper No. 12, filed 11/25/02, is acknowledged. The traversal is on the ground(s) that a search for any of the restricted inventions would be identical or largely overlapping a search of the others and also assert that the inventions are not distinct since all the inventions relate to modlation of VEGF activity. First it is noted that Group III does not include the modulation of VEGF and further it is noted that a search of Group III would not include a search of 514/44, or 536/24.5, for example. It is clear that the search of each of the inventions is not coextensive with the search of the others and further it is also clear that the inventions are not all related to the modulation of VEGF expression, for example.

The requirement is still deemed proper and is therefore made FINAL.

Claims 15-18 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected invention, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in Paper No. 12.

The instant invention is awarded a priority date of the filing of the instant application, 3/13/01. the instant invention is drawn to a specific oligonucleotide SEQ ID NO: 3 which contains 2'O-methyl ribonucleosides at the terminal four 5' and 3' positions of the oligonucleotide. This specific oligonucleotide does not enjoy specific support from

parent application 09/487,023 or 09/016,541 or provisional application 60/037,004. If applicant believes that the previous applications provide specific support for SEQ ID NO: 34 applicant is invited to point to such support with particularity.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

> (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Uchida et al [US 6,150,092] in view of Robinson [WO 95/04142, cited by applicant], Agrawal et al [PNAS Vol. 94: 2620-2625, 1997, cited by applicant] and Bennett et al [US 5,998,148].

Uchida et al have taught antisense and pharmaceutical compositions comprising antisense targeted to VEGF. Uchida et al have also taught the inhibition of VEGF in a subject via antisense nucleic acids targeted to VEGF (see claims 18-25, for example). In particular Uchida et al have taught antisense targeted to SEQ ID NO: 7 of VEGF and have taught numerous specific oligonucleotides targeted to SEQ ID NO: 7 such as SEQ ID NOS: 51, 54, 53, 50, 49, 38, and 41 (see claims 1-16, for example). It has been taught by Uchida et al that inhibition of VEGF results in the inhibition of solid tumor growth (see column1, for example) and have taught that if VEGF is present in the tumor

it is subject to VEGF inhibitory treatment. It has been taught that the development of antisense oligonucleotides to VEGF replaces the methodology of inhibiting VEGF in tumors with antibodies (see column 2, for example). Columns 4-5 discuss how one in the art can use known oligonucleotide modifications in VEGF antisense oligonucleotides, for example. At columns 7-8 it is taught that various kinds of cancer can be treated with VEGF directed antisense molecules. At column 27 it has been taught that VEGF antisense oligonucleotides can be used to inhibit the growth of solid tumors via the inhibition of VEGF which inhibits angiogenesis which in turn inhibits the growth of solid tumors, for example.

The antisense oligonucleotides claimed by Uchida et al are targeted, for example, to the specific region of VEGF nucleic acid SEQ ID NO: 7. It is noted that antisense oligonucleotides of the instant application, including claimed SEQ ID NO: 34 (modified version of SEQ ID NO:2) as well as SEQ ID NOS: 2, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 28, and 29, for example, are all targeted to SEQ ID NO: 7 of Uchida et al, and further all the antisense oligonucleotides of the instant application either overlap, embrace, or are embraced by the specifically claimed antisense of Uchida et al claim 7, for example (SEQ ID NOS: 51, 54, 53, 50, 49, 138, and 141 of Uchida et al, for example). It is clear that the antisense oligonucleotides claimed by Uchida et al reasonably be expected to have an IC50 value of between about 0.5 and 2.5 micromolar, especially since the claims (i.e. 4, 5, 12, 13) do not require any particular conditions to ascertain an IC50 value, for example. Finally Uchida et al have taught that that region of VEGF SEQ ID:7 is a “core region” (see column 21-22) and

further teach at column 26 that "[I]n view of the role of VEGF as a tumor angiogenic factor in vivo [citations omitted], the antisense nucleic acid having a nucleic acid sequence complementary to 8 or more nucleotides in the core region is useful as a therapeutic agent such as anticancer drug to inhibit the growth of solid tumors or a a diagnostic agent for cancers."

Uchida et al do not teach the 2'O-methyl modifications of SEQ ID NO: 34, the specific cells of claim 7, chemotherapeutic agents included in a composition comprising a VEGF antisense or the use of liposomes in the delivery of an antisense VEGF composition.

Robinson et al have taught the inhibition of VEGF to inhibit tumor angiogenesis (see page 4, for example). It has been taught at pages 7-8 that modifications to antisense nucleic acids are desirable to prevent attach by nucleases, for example, and it has been taught specifically, at pages 8-9, for example) the modification of an antisense oligonucleotide to comprise oligonucleotides that comprise an unmodified internal sequence that is flanked on the 5' and 3' termini by modified nucleic acid sequences.

Agrawal et al have taught the same modification used in SEQ ID NO: 34 in Table 1, for example. It has been taught that this oligonucleotide has nuclease resistance , for example.

Bennett et al have taught many available modifications available to one in the art at the time the invention was made and this includes hybrid, mixed and gapmer oligonucleotides which all relate to an antisense oligonucleotide comprising an RNase substrate region between modified portions of an oligonucleotide, where the

modification(s) provide for increased nuclease protections and/or better substrate affinity, for example (see columns 6-10 and particularly Example 5, for example). At columns 12-13 it has been taught the numerous available compositions and delivery vehicle available for one in the art at the time of invention including the use of liposome formulations for the delivery of antisense oligos to a patient, for example.

One in the art would clearly have had motivation to make the instantly claimed antisense molecules since it is absolutely clear that the region targeted (core region SEQ OID NO:7 of Uchida et al) has been clearly shown by the prior art to be a desired target for antisense inhibition of VEGF where Uchida et al have taught that one in the art would expect antisense oligonucleotide so targeted to inhibit VEGF in solid tumors. Furthermore the specific antisense is not only targeted to the taught target sequence but overlaps, embrace or are embraced by the specific VEGF antisense taught by Uchida et al where the instant application has shown that antisense targeted thereto would be expected to have an IC50 value recited in the claims (ie the IC50 value is an observed property of antisense targeted to this core region of VEGF, for example).

**[A REFERENCE TEACHING PRODUCT APPEARING TO BE SUBSTANTIALLY IDENTICAL IS MADE THE BASIS OF A REJECTION,
AND THE EXAMINER PRESENTS EVIDENCE OR REASONING TENDING TO SHOW INHERENCY, THE BURDEN SHIFTS TO THE
APPLICANT TO SHOW AN UNOBVIOUS DIFFERENCE**

"[T]he PTO can require an applicant to prove that the prior art products do not necessarily or inherently possess the characteristics of his [or her] claimed product. Whether the rejection is based on inherency' under 35 U.S.C. 102, on prima facie obviousness' under 35 U.S.C. 103, jointly or alternatively, the burden of proof is the same...[footnote omitted]." The burden of proof is similar to that required with respect to product-by-process claims. *In re Fitzgerald,* 619 F.2d 67, 70, 205 USPQ 594, 596 (CCPA 1980) (quoting *In re Best,* 562 F.2d 1252, 1255, 195 USPQ 430, 433-34 (CCPA 1977)).]

One in the art would clearly look to this specific region to make antisense oligonucleotides to inhibit VEGF since this specific region and antisense thereto have been clearly taught in the art to be effective antisense oligonucleotides and target sequence. One would expect that the inhibition conditions recited in the claims would be met since these values were observed upon making antisense targeted to the specific region clearly taught in the prior art. One would have been motivated to make the modification specifically as in instant SEQ ID NO: 3 since this type of modification was clearly taught in the art as one of many modifications one in the art could choose to increase nuclease stability or to increase target affinity, for example. Bennett et al have clearly shown that liposome delivery is one of a number of methods one in the art could have chosen to deliver an antisense to a subject. One would clearly have chosen any of the vast range of solid tumors where VEGF is expressed since it is clear from the teachings of Uchida et al and Robinson that any tumor expressing VEGF is clearly a target for antisense VEGF therapy. In regard to claims 2, 3, the following is noted:

"It is prima facie obvious to combine two compositions each of which is taught by the prior art to be useful for the same purpose, in order to form a third composition to be used for the very same purpose.... [T]he idea of combining them flows logically from their having been individually taught in the prior art." In re Kerkhoven, 626 F.2d 846, 850, 205 USPQ 1069, 1072 (CCPA 1980) (citations omitted) (Claims to a process of preparing a spray-dried detergent by mixing together two conventional spray-dried detergents were held to be prima facie obvious.). See also In re Crockett, 279 F.2d 274, 126 USPQ 186 (CCPA 1960) (Claims directed to a method and material for treating cast

iron using a mixture comprising calcium carbide and magnesium oxide were held unpatentable over prior art disclosures that the aforementioned components individually promote the formation of a nodular structure in cast iron.); and Ex parte Quadranti, 25 USPQ2d 1071 (Bd. Pat. App. & Inter. 1992) (mixture of two known herbicides held prima facie obvious). But see In re Geiger, 815 F.2d 686, 2 USPQ2d 1276 (Fed. Cir. 1987) ("Based upon the prior art and the fact that each of the three components of the composition used in the claimed method is conventionally employed in the art for treating cooling water systems, the board held that it would have been prima facie obvious, within the meaning of 35 U.S.C. 103, to employ these components in combination for their known functions and to optimize the amount of each additive....Appellant argues... hindsight reconstruction or at best,... obvious to try'.... We agree with appellant.").

The invention as a whole would therefore have been prima facie obvious to one in the art at the time the invention was made.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sean R McGarry whose telephone number is (703)305-7028. The examiner can normally be reached on M-Th (6:00-4:30).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John LeGuyader can be reached on (703) 308-0447. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 308-4242 for regular communications and (703) 872-9307 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0196.
